

Mölnlycke Health Care is a world leading manufacturer of single-use surgical and wound care products to the professional health care sector. Through cooperation with Debra, EB patients have discovered the positive benefits of our dressings with Safetac® technology.

Safetac technology

Safetac is a patented adhesive technology that minimises pain to patients and trauma to wounds. safetac technology is available exclusively on Mölnlycke Health Care dressings, including Mepilex® wound care dressings, Mepitel®, Mepiform® and Mepitac®.

Safetac technology is less painful because it

1. tacks gentle to dry surfaces, like skin, but not to moist surfaces, such as open wounds.
2. moulds to the skin's pores, covering more skin surface and spreading peel forces on removal to prevent skin stripping.
3. seals the wound margins, ensuring exudate does not spread to the surrounding skin and minimising maceration.

The science of Safetac technology

Safetac technology's soft silicone moulds to the skin's uneven surface pores, while other adherents simply stick to the tops of the skin's surface.

This moulding action is the secret to why Safetac technology is so effective at minimising pain and preventing maceration.

Skin stripping occurs with traditional adhesive.

No skin stripping occurs with Safetac technology.
